Team TBD/Hey Dude

Tetris MVP

Team Goal

Build a small, playable Tetris game that demonstrates the complete core gameplay loop. The MVP should be easy to start, understand, and replay, while leaving visual polish and extra features for later iterations.

Objective

Deliver a working game in which a player can move and rotate falling pieces, clear completed rows, and reach a clear win or game-over state. With Functioning sound effects and UI.

MVP Scope

Must have

- A playable board with falling pieces and collision handling
- Left/right movement, rotation, soft drop, and hard drop
- Completed-row clearing and a basic score
- A visible next-piece preview
- Clear win and game-over states with a restart option

Sprint 1 Goals

- Establish the core gameplay loop from spawning a piece to locking it in place
- Implement the essential controls and line-clearing rules
- Add basic score and next-piece feedback
- Make win, game-over, and restart behavior understandable
- Test the MVP from launch through a complete play session

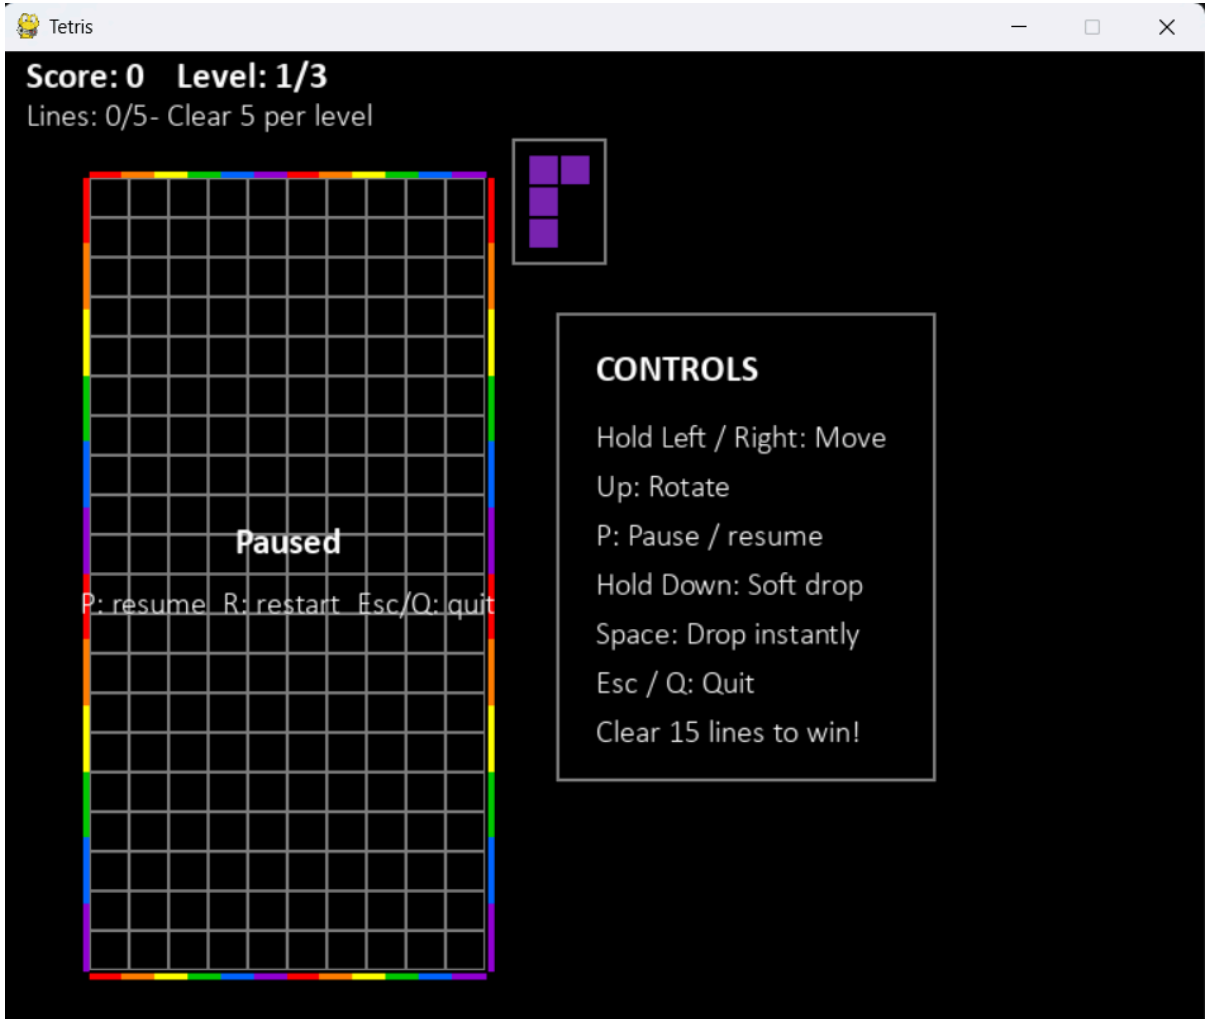

Team Members Contribution

Austin Shelton

- Line of Code: 420
- Features/Requirements: Ui design, Next piece func, Menu board
- Burndown rate: 100%

Contributions in Action

Code Totals

- Line of Code: 1600~
- Planned Features: 3/3
- Planned Requirements: 9/9

Sprint 2 Goals

- Build on the MVP with multiple levels and progressively faster gameplay
- Expand scoring with line-clear rewards and combo tracking
- Add a ghost-piece preview and clearer line-clear feedback
- Refine the menus, audio controls, and win/game-over flow
- Playtest and balance difficulty, then fix issues found during testing

What we did

- Focus: Deliver the core game as one cohesive, playable MVP
- Prioritize required gameplay and usability over optional polish
- Confirm each must-have feature works in a complete play session

MVP

- A player can launch the game and begin playing without setup beyond starting the application
- Pieces can be moved, rotated, dropped, and locked without passing through the board or other pieces
- Completed rows clear and update the score
- The player can identify the next piece and understand when the game is won or over
- The player can restart and play again
